

ParticiMap User Documentation

How to explore Maps?

The ParticiMap tool facilitates geographic surveys to collect Places by local communities and stakeholders using a Map as the main interface. To explore the Maps created follow these steps:

1. Navigate to the Maps section at <https://participmap.cartospot.com/maps/>.
2. In this section, you will find all available Maps.
3. Use the sidebar functionality—**Filter by Pilot Community**—to select Maps from "Elfsina," "Balina," or "Milano."
4. Each Map is displayed as a card with information and a button to view the selected Map.

Mapping a new Place: How can I contribute to a Map?

To contribute a new Place to a Map, follow these steps:

1. Navigate to the desired Map.
2. Click the **ADD A PLACE** button.
3. This action will show:
 - A red marker with a '+' sign on the basemap indicating where your new Place will be geolocated.
 - The Map's geosurvey, which contains a set of questions for you to submit data and an image or photo using your mobile phone's camera. This information will be associated with the Place on the Map.

When setting the Place geographic position:

- Zoom in and drag the basemap to set the correct position for the Place.
- The geosurvey will also display an approximate geocoded Address that is automatically generated.
- This address is submitted as a complementary reference to the precise geographic coordinates of the Place.
